Table of Contents

Installation Prerequisites

System Requirements :

Microsoft Windows SharePoint Service 3.0, Microsoft Office SharePoint Server 2007, SharePoint Foundation 2010 or SharePoint Server 2010.

Supported Browser:
- Internet Explorer 6, 7, 8
- FireFox 3.0+
- Safari 3.0+
- Chrome

Language Support:
- English

RSS Viewer Installation

There are two installation approaches. One is to use the installation wizard for automatic installation. The other way is to use STSADM command tool for manual installation. This section describes both approaches in detail.

Automatic Installation Approach

The software installation package contains the installer file, solution package file, image, and etc. You must be the *SharePoint Farm Administrator* for the successful installation. The steps are as follows.

- Open the folder for RSS Viewer installation and double-click the "Setup.exe" to start the installation.

| Name	Type
banner	JPEG image
EULA	Rich Text Format
FireArrow.SharePoint.RssViewer	WSP File
Setup	Application
Setup.exe	CONFIG File

- The setup wizard will be displayed. Click "Next" to proceed.
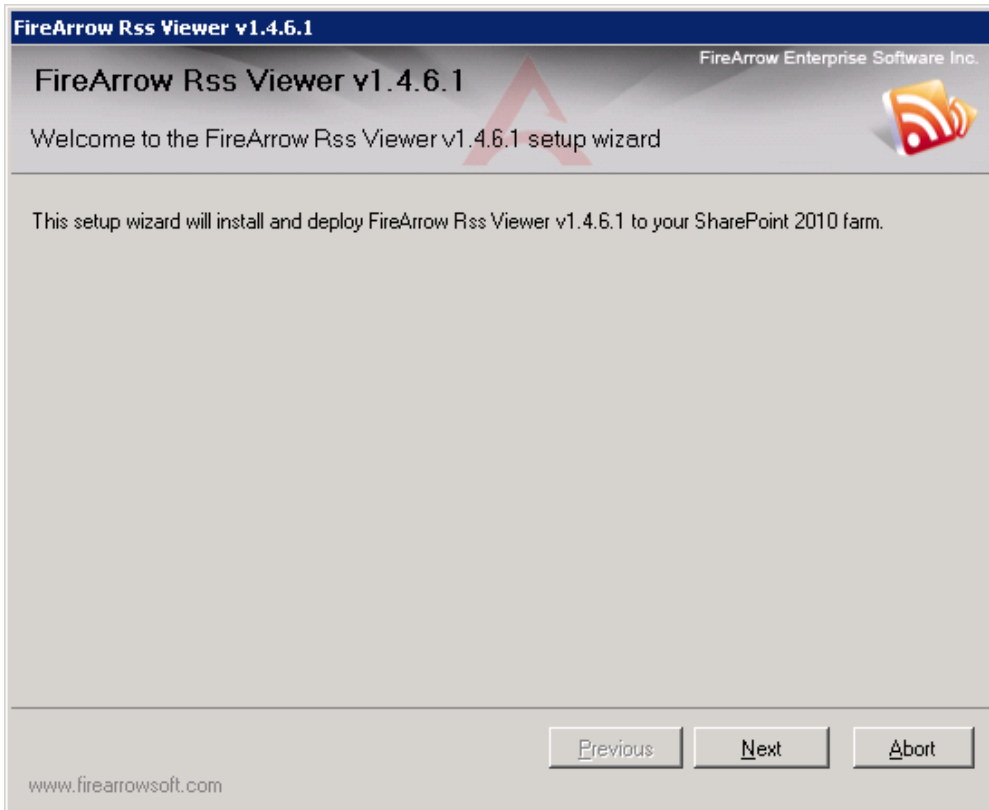

- Wait for system check to complete and then click "Next".
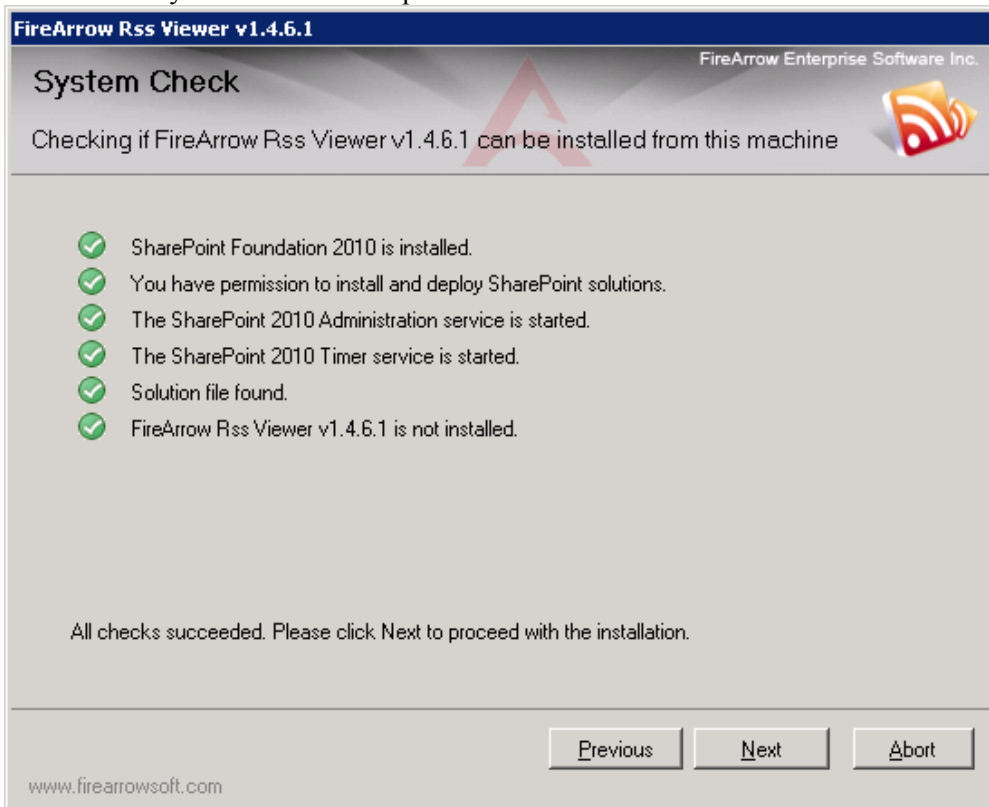

- After you have read and accepted the License Agreement, click "Next" to continue.

- Select one or more target web applications and then click "Next".
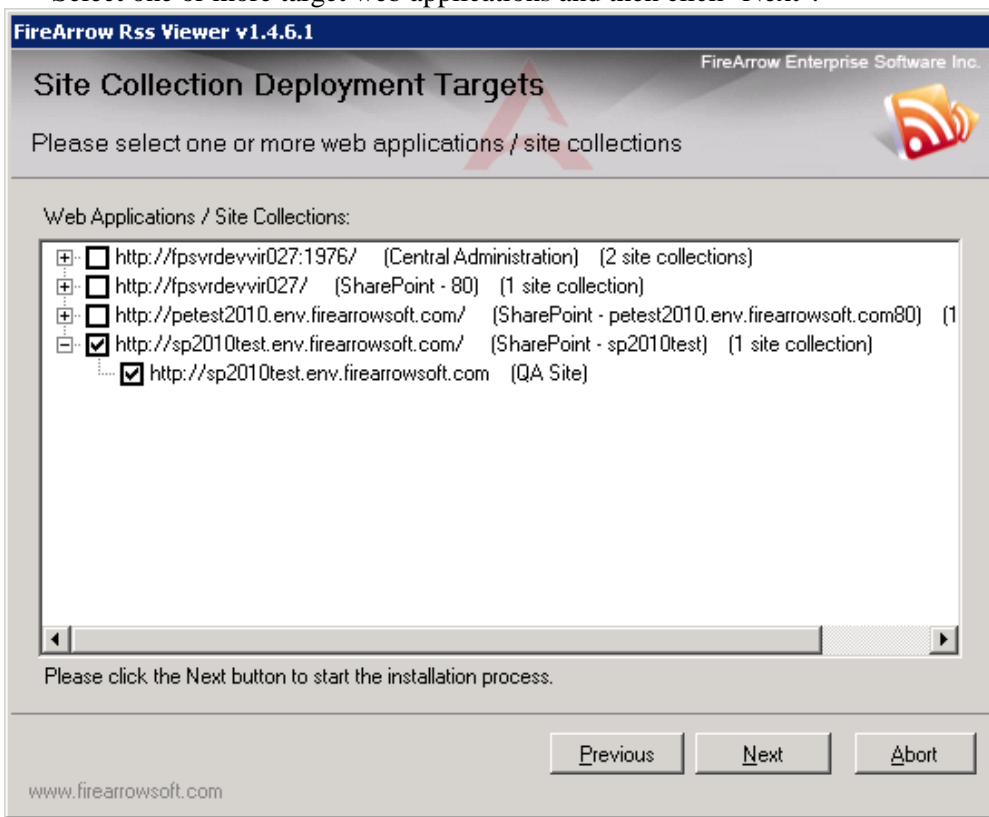

- The wizard starts installing the solution and display the installation progress.

- Installation is completed successfully and clicks "Close" to exit the wizard.

- After installation, run the command "*iisreset /noforce*" to restart IIS.

Manual Installation Approach

The folder for RSS Viewer installation contains the solution package which you need for manual installation.

| Name	Type
banner	JPEG image
EULA	Rich Text Format
FireArrow.SharePoint.RssViewer	WSP File
Setup	Application
Setup.exe	CONFIG File

The steps for manual installation are as follows:

1. Copy the solution package to the server farm and run following commands to add the solution to the server farm:
   stsadm.exe -o addsolution -filename "FireArrow.SharePoint.RssViewer.wsp"
   stsadm -o execadmsvcjobs

2. Then you need to deploy the solution package. You can deploy the solution package either by running STSADM commands or using the SharePoint 3.0 Central Administration web interface.

   - **Option 1: STSADM commands**
     You need to run the following two commands for solution deployment:
     1) stsadm -o deploySolution -name "FireArrow.SharePoint. RssViewer.wsp" -immediate -url http://qa.test.FireArrowsoft.com -force –allowCasPolicies
        Note: Please replace the url (http://qa.test.firearrowsoft.com) with your target web application's url.

     2) stsadm -o execadmsvcjobs

   - **Option 2: SharePoint 3.0 Central Administration:**
     1) Open Central Administration, select Operations, and select Solution management under the Global Configuration.

        Farm Management
        Configure alternate access mappings | Manage farm features |
        Manage farm solutions | Manage user solutions |
        Configure privacy options | Configure cross-firewall access zone
        Deploy or retract solution packages across the farm

     2) Select the solution "FireArrow.SharePoint.RssViewer.wsp", and then select Deploy Solution from the Solution Properties.

SharePoint 2010   Central Administration ▸ Solution Management
This page has a list of the Solutions in the farm.
